AZURE DEVOPS PROJECT SETUP AND USER STORY MANAGEMENT

Aim:

To set up an Azure DevOps project for efficient collaboration and agile work management.

1. Create An Azure Account

The screenshot shows the Azure DevOps sign-up page. The browser address bar displays the URL: `aez.dev.azure.com/signup?acquisitionId=6aade789-5a52-4342-b21b-353c8493b2e4&campaign=o~msft~profile~service_attach&mkt=en-US`. The page title is "Almost done...". The user's email is `arjunkothandan.2006@gmail.com`. The organization name is `dev.azure.com/arjunkothandan20060840`. The region is set to "India". The billing subscription is "Azure for Students (6dde070a-d1df-430f-83cf-a...)". A CAPTCHA challenge is shown with the text "sdqxDb". The "Continue" button is visible at the bottom right.

2. Create the First Project in Your Organization

- After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.
- On the organization's **Home page**, click on the **New Project** button.
- Enter the project name, description, and visibility options:
 - Name:** Choose a name for the project (e.g., **LMS**).
 - Description:** Optionally, add a description to provide more context about the project.
 - Visibility:** Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
- Once you've filled out the details, click **Create** to set up your first project.

About this project [Like](#) 0

The Web-Based Complaint Management System is designed to provide an efficient and structured platform for users to submit, track, and resolve complaints. The system enables seamless interaction between users, administrators, and staff members, ensuring that issues are recorded, managed, and resolved in a timely manner.

Users can register and securely log in to the system, submit complaints with relevant details such as category, description, and optional images, and monitor the progress of their complaints through various stages like Submitted, Assigned, In Progress, Resolved, and Closed. This ensures transparency and keeps users informed throughout the resolution process.

Administrators play a key role in managing the system by viewing all complaints, assigning them to appropriate staff members, and generating reports to analyze performance and efficiency. Staff members are responsible for updating complaint statuses, adding resolution notes, and ensuring that issues are addressed effectively.

The system is developed using modern web technologies with a frontend interface for user interaction and a backend API for business logic and data processing. Data is stored in a structured database, and file uploads are managed efficiently. Additionally, notifications are sent to users to keep them updated on the status of their complaints.

The project follows an Agile methodology, implemented using Azure DevOps, where development is divided into two sprints. Sprint 1 focuses on core functionalities such as authentication and complaint submission, while Sprint 2 includes advanced features like status tracking, reporting, notifications, and performance optimization.

Overall, the system improves complaint handling efficiency, enhances communication between stakeholders, and provides a scalable and user-friendly solution for real-world problem management.

5. To manage user stories:

a. From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.

b. On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

Result:

Successfully created an Azure DevOps project with user story management and agile workflow setup.
